Highlights in Bioplastics

Newsletter available for download

Berlin, February 3rd, 2005

For many reasons bioplastics are regarded as an important future technology. Their future has already begun – a set of products has been successfully introduced into the markets. With the newsletter "Highlights in Bioplastics" the industry association IBAW points out the progress made in this sector. Product innovation and the market development are in the focus of diverse short articles. They illustrate the growing diversity of applications. IBAW is expecting the positive development to continue. Support from politics will contribute to this. The newsletter is now available for downloading at www.ibaw.org.

The International Biodegradable Polymers Association & Working Groups is an international multi sectoral association for the promotion of innovation in bioplastics and biodegradable materials. The association comprises companies from the chemical and plastics industries, scientific institutes and innovative users.
